

Our Panel of GPCRs Assays for Lipid mediators

Lipid mediators (eg: arachidonic acid, leukotrienes, lysophosphatidic acid, endocannabinoids) are involved in a wide range of pathophysiological processes and their dysregulation have been linked to various serious diseases.

GPCRs involved in lipid mediator signaling are therefore important targets for pharmacological intervention. *We offer services* based on our well recognized expertise on GPCRs and our comprehensive platforms of *cell lines* and *services (HTS, compound profiling)*.
